

Point of Sale

The Point of Sale module provides quick registering of charges and payments in a cash-register style of entry, prints a sales receipt, and provides management and sales analysis reporting.

This system is fully interfaced.

Products sold are immediately removed from Inventory on-hand counts and all dollar transactions are passed to the General Ledger system at the frequency selected.

Point of Sale includes calculation of commissions, sales reporting by salesperson, and statistical reporting on product sales volumes.

General Ledger account numbers and Inventory product codes are verified at time of entry, and General Ledger transactions are automatically accumulated for the ledger system.

Features of the Point of Sale module include:

- Quick Entry via scanner or keyboard

- Price / Entry Overrides.

- Sales receipt printer support.

- Cash drawer support.

- Automatic reduction of inventory.

- Commissions by salesperson.

- Sales analysis reporting.

- Automatic pricing with override.
